Titrations Pre Lab*

PRE-LAB DISCUSSION: In the chemistry laboratory, it is sometimes necessary to experimentally determine the concentration of an acid solution or a base solution. A procedure for making this kind of determination is called an ACID-BASE TITRATION.

PRE-LAB QUESTIONS 1. Use the internet or your textbook as a reference to compare and contrast the Arrhenius Theory of acids and bases vs. the Brønsted-Lowery Theory. According to Arrhenius acids are hydrogen-containing compounds that ionize to get hydrogen protons in an aqueous solutions, and bases are compounds that ionize in an aqueous solution that yield hydroxide ions.

A procedure for making this kind of determination is called an acid-base titration. In this laboratory process, a solution of known concentration, called the standard solution, is carefully added to a solution of unknown concentration until the mixture becomes neutral.

equation for this reaction is:  $\text{C}_8\text{H}_5\text{O}_4\text{K}(\text{aq}) + \text{NaOH}(\text{aq}) \rightarrow \text{Na}^+(\text{aq}) + \text{K}^+(\text{aq}) + \text{C}_8\text{H}_4\text{O}_4^{2-}(\text{aq}) + \text{H}_2\text{O}(\text{l})$  Write the net ionic equation for this reaction.

## *Lab Practical: Acid-Base Titration*

In this experiment, the reagents combined are an acid,  $\text{HCl}(\text{aq})$  and a base,  $\text{NaOH}(\text{aq})$  where the acid is the analyte and the base is the titrant. The reaction between the two is as follows:  $\text{HCl}(\text{aq}) + \text{NaOH}(\text{aq}) \rightarrow \text{H}_2\text{O}(\text{l}) + \text{Cl}^-(\text{aq}) + \text{Na}^+(\text{aq})$  In this case, Sodium and Chloride act as spectator ions and form into salts in a neutralization reaction.

In an acid-base titration, the neutralization reaction between the acid and base can be measured with either a color indicator or a pH meter. Acid + Base  $\rightarrow$  Salt + Water In this experiment, a phenolphthalein color indicator will be used. Phenolphthalein is colorless in acidic solutions and pink in basic solutions.

Acid-base titrations are also called neutralization titrations because the acid reacts with the base to produce salt and water. During an acid-base titration, there

# Read Online Acid Base Titrations Pre Lab Answers

is a point when the number of moles of acid ( $H^+$  ions) equals the number of moles of base ( $OH^-$  ions). This is known as the equivalence point.

An acid-base titration is a quantitative analysis of acids and bases; through this process, an acid or base of known concentration neutralizes an acid or base of unknown concentration. The titration progress can be monitored by visual indicators, pH electrodes, or both. The reaction's equivalence point is the point at which the titrant has exactly neutralized the acid or base in the unknown analyte; if you know the

*Chemistry LibreTexts*

There are lots of acid-base indicators you could use for your titration. Phenolphthalein is a good all around choice because it turns from colorless to colored (it is much easier for the human eye to distinguish than changes from one color to another) and because of the pH range over which it changes.

*EXPERIMENT 4: ACID-BASE TITRATION -*

*Intro.chem.okstate.edu*

An acid-base titration is a procedure that can be conducted to determine the concentration of an unknown acid or base. In

# Read Online Acid Base Titrations Pre Lab Answers

an acid-base titration, a certain amount of a titrant with a known concentration is added to completely neutralize the titrand- the unknown concentration, reaching the equivalence point.

*pH Titration Lab Explained | SchoolWorkHelper*

The titration in this lab took place between the strong acid HCl and the strong base, NaOH. In strong acid/strong base titrations, the equivalence point is found at a pH of 7.00. In titrations with a weak base and a strong acid, the pH will always be less than 7 at the equivalence point because the
