Understanding the origins of poor literacy and numeracy skills in adulthood and how to improve them is of major importance when society places a high premium on proficiency in these basic skills. This edited collection brings together the results of recent longitudinal studies that greatly extend our knowledge of what works in raising skill levels, as well as the social and economic returns to improvement. Many fundamental research questions in adult education involve change over time: how adults learn, how program participation influences their acquisition of skills and knowledge, and how their educational development interacts with their social and economic performance. Although a growing number of longitudinal studies in adult basic education have recently been completed, this book is the first systematic compilation of findings and methods. Triangulating findings from different methodological perspectives and research designs, and across countries, this text produces convergence on key conclusions about the role of basic skills in the modern life course and the most effective ways of enhancing them.

This book explores the social practice of literacy, numeracy and language and its implications for teaching and learning adult basic skills. Leading international experts argue that literacy, numeracy and language are more than just a set of skills or techniques, but are shaped by the social and cultural context within which they are taking place; the meanings they have for users; and the purposes they serve. This shifts the focus from a narrow, functional and externally imposed definition of literacy, numeracy and language learning, to more open and numerous definitions that focus on what people do with their knowledge, understanding and skills in a range of contexts. Adult Literacy, Numeracy and Languageshows how the social practice approach to learning and teaching can be used to develop more inclusive views of adult literacy, numeracy and language. Bringing together the views of researchers, policy makers and practitioners, it helps readers to develop an understanding of contemporary policy developments and encourages them to examine their own practice as adult basic education teachers, in order to respond more effectively to the needs of their students. This book is a valuable resource for practitioners, researchers and students on courses in adult and continuing education (particularly basic skills), postgraduate students, and researchers in the field of post-compulsory education.

With a radically new perspective on reading, writing and mathematics for adults, this refreshing and challenging book shows how teachers and curriculum developers have much to gain from understanding the role of literacy in learners' lives, bringing in their families, social networks and jobs. Looking at the practicalities of how teachers and students can work with social practice in mind, Adult Literacy as Social Practice is particularly focused on: * how a social theory of literacy and numeracy compares with other theoretical perspectives * how to analyze reading and writing in everyday life using the concepts of social literacy as analytical tools, and what this tells us about learners' teaching needs * what is actually happening in adult basic education and how literacy is really being taught * professional development. With major policy initiatives coming into force, this is the essential guide for teachers and curriculum developers through this area, offering one-stop coverage of the key concepts without the need for finding materials from far-scattered sources.

Offers guidance on how to work with adult learners to develop literacy skills and includes case studies of real student experiences and practical suggestions for teaching, planning, and assessment.

Over the last two decades, an increasingly economicistic discourse has dominated discussions about adult literacy and numeracy. This book provides critiques of, and alternative narratives to the dominant discourse. Authors provide tools and methodologies of critique, including ways of seeing how policies in the countries of focus come to be captured almost completely by the interests of business and industry, as well as how to critically interpret the data that policy makers use to justify their priorities. But adult literacy and numeracy practitioners and learners find spaces and places to pursue learning that matters for the lived experiences of adults and their communities. Beyond Economic Interests presents the struggles and achievements of practitioners and learners that lead the readers of the book to critically appreciate that a counter narrative to the purely economicistic discourse of adult literacy and numeracy is much needed, and possible.
