Systems theory is useful to management because it aims at achieving the objectives and it views organisation as an open system. Chester Barnard was the first person to utilize the systems approach in the field of management. He feete that the executive must steer through by keeping a balance between conflicting forces and events.

An open system is a type of system that exchanges reactions with its environment. Ludwig von Bertalanffy who was a biologist developed the open system theory in 1956.

Explain the 'open systems' approach to organisations, and ...

Open systems theory is a way of thinking about dynamic systems, or systems that interact with their environments. All businesses are dynamic systems, evolving and changing in response to feedback. Open systems theory is useful for businesses because it provides a framework for thinking about processes such as change – a regular part of running a business.

The external subsystem here are the buyers or the customers who visit the store. Only when all these subsystems work together, the system is said to function effectively. Open and Closed System. The organization can act as an open or a closed system. An open system is the one where the elements of the system can interact with the environment.

Differentiation: An open system moves in the direction of differentiation and elaboration. Old patterns are changed by new specialized functions. Organizations, like other open systems, move towards well-differentiation and specialization of roles and functions.

TL;DR (Too Long; Didn't Read) The systems approach views an organization as an organic and open system made of interdependent subsystems. It was first developed in the 1960s by Ludwig Von Bertalanffy, Lawrence J. Henderson, Daniel Katz, W.G. Scott, Robert L. Kahn, J.D. Thompson and W. Buckley.

1. System approach considers the organisation as a dynamic and inter-related set of parts. Each part represents a department or a sub-system. Each department has its sub-system. Continuous and effective interaction of sub-systems helps to

attain goals of the larger system. Thus, every sub-system is a system and has sub-systems which together make an organisation a set of mutually dependent parts and their sub-parts.

Modular Open Systems Approach (MOSA) is a systems engineering approach that involves dividing large entities into smaller modules with standard interfaces. It builds on principles such as “ high cohesion, low coupling ” to produce systems that are more robust, maintainable, and easier to update over time.
