The system makes use of the speed breaker press and then uses a rack and pinion arrangement to press down and run generator motor thus generating energy. The spring mechanism is the used to drive the speed breaker back into original position. It converts rotary motion into linear motion, but sometimes we use them to change linear motion into rotary motion. This mechanism is very economical and easy to install.

~~Speed Breaker Power Generators — IJERT Journal~~

Generation of electricity through the speed breaker mechanism is one of the most recent power generation concepts. This device converts the kinetic energy of vehicles into electric energy by installing movable speed breaker on the road, it takes stroke motion of the vehicles and converts it to the rotary motion by rack and pinion mechanism and it generates the electricity.

~~GENERATION OF ELECTRICITY THROUGH SPEED BREAKER~~

The cost of electricity generation and storage per mega watt from speed-breakers will be nearly Rs 1 crore as opposed to about Rs 8 crore in thermal or hydro power stations. The functioning will be as follows: The speed breaker on a busy road will be lifted to some height from one side and fixed to the road from other side.

~~ON Power Generation through Speed breaker~~
Speed breaker POWER GENERATOR is electro-mechanical energy generating machine. This machine converts reciprocating motion in to rotary motion. The rotational power is stored in flywheel & flywheel rotates dynamo, which generates electricity. Here first important point is how we get reciprocating motion, which is the prime input in the system.
