Impact Assessment

The Canter text appeals mainly to Civil Engineering students taking course work in environmental assessment practice or impact assessment, usually taught at the junior/senior level as a popular elective. Some chemical and environmental engineers take the course as well. The author has specifically beefed up and improved the chapters on biological, cultural, and socioeconomic environmental factors. The book continues to emphasize both production and assessment aspects of environmental factors, i.e., air, water, and noise, together with some interesting case studies. The latest governmental methodologies and Environmental Impact Studies have been included in this timely revision.

The experience of highly industrialized countries demonstrates that single-minded pursuit of economic development is self-defeating because, by disregarding the other components of what is commonly called "the quality of life", it creates conditions which are not acceptable to large sectors of the population. In the recent past a number of projects, for example, major dams, have had unexpectedly deleterious social, environmental and health consequences. As a result, many government departments and agencies are investigating the impacts of specific projects and are examining the role impact analysis could play in project planning. The process of environmental impact analysis has been developed, tested and institutionalized in several countries. The objective of the process is a prior identification and definition of likely environmental impacts of projects such as public works, industrial developments and tourist developments, as well as the impact of policies and legislative proposals. The environmental impact analysis process also includes the definition of alternative courses of action which would achieve comparable economic objectives while eliminating some or all of the detrimental environmental consequences. Identification of preventive or precautionary measures, which would minimize the unavoidable impacts, forms an integral part of the process. The aim should be for a balanced appraisal in which economic, technical, social, environmental and health aspects are fully evaluated. Thus viewed, environmental impact analysis emerges as one of the most powerful planning tools for the prevention of environmental pollution and degradation.

The book is comprised of practical environmental and socioeconomic information which can be used in planning and implementing CEAM studies. Such information has been compiled from CEAM practices in the USA, Canada, Australia, European, and many other countries. Considerable information on step-wise CEAM processes, along with connector methods and resource-related methods and tools for predicting, mitigating, and managing cumulative effects on key Valued Ecosystem Components (VECs), is included.

This book discusses the environmental impact of water resources projects. Information from literature related to the implementation of studies on water resources projects such as dams and reservoirs, channelization, and dredging are summarized. Other topics covered are methodologies, transport, and decision-making.

Director, this publication studies the effectiveness and efficiency of the implementation of the National Environmental Policy Act (NEPA). Divided into three main sections, part one covers the historical background and trends of NEPA. Part two addresses current substantive and conceptual issues associated with the environmental impact assessment (EIA) process. Part three discusses future opportunities including impact on humans, effective public participation in the EIA process and the need for sustainability. This excellent reference brings together 28 contributing authors who combine their expertise to address a multitude of topics. Environmental Policy and NEPA is mandatory reading for the professional, researcher, government policymaker, activist, student or anyone looking for a complete presentation of the EIA process.
