The Farnsworth-Munsell 100 hue test is one of the most famous color vision tests available. It belongs to the group of hue discrimination, also called arrangement tests. Another famous test in this group is the Farnsworth D15 arrangement test.

**Farnsworth Munsell 100 Hue Color Vision Test—Colblinder**

The Farnsworth–Munsell 100 Hue Color Vision test is a test of the human visual system often used to test for color blindness.

**Farnsworth–Munsell 100 hue test—Wikipedia**

The Farnsworth-Munsell 100 Hue Test (or FM100 Hue Test) is an easy-to-administer test and a highly effective method for evaluating an individual's ability to discern color. The test requires the use of standardized daylight conditions such as those found in X-Rite's SpectraLight QC and Judge QC I light booths.

**Farnsworth Munsell 100 Hue and Color Test | X-Rite Color---**

Try out the Farnsworth-Munsell 100 Hue Color Blindness Test (F-M 100 Hue Test) and see how good you are in color ordering. This test is a very typical arrangement or also called hue disrimination test. It is based on 88 distinct hues (and not 100 as the name suggests) which are mixed randomly in four batches of 22 plates.

**F-M 100 Hue Color Blindness Test—Colblinder**

The Farnsworth-Munsell 100 Hue Test from Munsell Color is the industry standard for determining color discrimination and identifying color deficiencies. This portable, 15-minute test analyzes how accurately you see color. The easy-to-use scoring software indicates where you have a color vision deficiency such as color blindness.

**FM 100 Hue Color Vision Test—NEURTEK**

The new on-line FM 100 hue test results database lets you compare your color vision to a larger community of color evaluators who've taken the Farnsworth- Munsell 100 Hue Test. All you need is an Internet connection. Share data with other facilities, color discrimination. suppliers and customers.

**About the Farnsworth Munsell FM 100 Hue Color Vision Test**

Web-based platform independent scoring for the Farnsworth-Munsell FM 100-Hue, the Farnsworth D-15 and the Lanthony D-15 color vision tests. The result of the test is a SVG (Scalable Network Graphics) polar diagram. Since SVG is a vecor graphic file format, the quality of the output is limited only by the capabilities of the output device.

**Farnsworth Munsell FM 100 Hue, Farnsworth D-15 and---**

The FM100 hue test The Farnsworth Munsell hue test is a great test for color vision and is used in many industries. You can buy one from color companies for about \$600-800 or you can take it online for FREE! So is color correction your calling?

**What's Your Color Score? Farnsworth Munsell FM100 hue test**

Such scores occur because the FM 100 Hue Test evaluates color aptitude or ability to make color discrimination. Color discrimination is independent of color defectiveness so it's possible for some people with average scores to have poorer color discrimination than those with color vision defects.

**What Does My Score on the Farnsworth Munsell 100 Hue Test---**

If you work in a field where color is important, or you're just curious about your color IQ, take our online challenge to find out. Based on the Farnsworth Munsell 100 Hue Test, this online challenge is a fun, quick way to better understand your color vision acuity. Just remember, this is not a replacement for the full test!

**Free Online Color Challenge and Hue Test; X-Rite**

The Farnsworth-Munsell 100-hue test (FM 100-hue test) consists of 85 color samples that span the entire natural color circle and are arranged in four boxes (21 or 22 colors each). In this test, the score for placement of each color sample is obtained by recording the absolute differences between the number designated for each sample (written on its reverse) and those of the adjacent samples.

**Farnsworth Munsell 100 Hue Test—an overview---**

The Farnsworth-Munsell 100 Hue Color Vision Test is very time consuming and reveals the type of color blindness but can not distinguish between dichromacy and anomalous trichromacy. For accurate results the test should be administered in a viewing booth that simulates natural light as closely as possible.

**Test for Colorblindness | Farnsworth Munsell 100 Hue Color---**

FM 100 Hue Color Vision Test This test uses 88 plates and not 100. It was designed by Dean Farnsworth Munsell in 1943 in order to detect the ability to differentiate different shades of colors. In this test, a person under control simply has to arrange the shades and properly manage the sequence.
