Rather than sounding false alarms about a genderwide crisis in boys' academic achievement, here's a book that cuts through the confusion to explain why "some" boys struggle in school and how you can effectively intervene without jeopardizing the achievements of other, more successful, learners (boys and girls). Drawing from large-scale studies, recent insights on social and learning-style factors, and lesson plans and anecdotes from real teachers, Cleveland equips you with a flexible and practical framework for addressing the needs of struggling male students that: (1) Replaces underachieving boys' negative attitudes about learning; (2) Reconnects boys to school, learning, and believing in being a competent learner; (3) Rebuilds learning skills that lead to success in school and in life; and (4) Reduces the need for unproductive and distracting behaviors as a means of self-protection. Instead of looking for a one-size-fits-all-boys solution, explore ways to identify and respond to specific reasons for underachievement among boys who fall behind and stay behind, boys who drop out too soon, and boys you just never seem to reach. This total solution helps you address: (1) The influence of nonacademic factors on academic success; (2) Factors contributing to the experience of school; (3) How competence can enhance persistence; and (4) How the classroom's physical arrangement affects a learner's success. Each aspect of this book's approach offers you a way to move underachieving boys from a position of weakness toward one of strength--giving them the tools to succeed in school and beyond.

The book examines how task-based language teaching (TBLT) can be carried out with young beginner learners in a foreign language context. It addresses how TBLT can be introduced and implemented in a difficult instructional context where traditional teaching approaches are entrenched. The book reports a study that examined how TBLT can be made to work in such a context. The study compares the effectiveness of TBLT and the traditional “ present-practice-produce ” (PPP) approach for teaching English to young beginner learners in Japan. The TBLT researched in this study is unique as it employed input-based tasks rather than oral production tasks. The study shows that such tasks constitute an ideal means of inducting beginner learners into listening and processing English. It also shows that such tasks lead naturally to the learners trying to use the L2 in communication. It provides evidence to support the claim that TBLT promotes the kind of naturalistic interaction which is beneficial for the development of both interactional and linguistic competence. The book concludes with suggestions for how to implement TBLT in Japanese school contexts.

This strong foundation, coupled with the wide variety of activities that are suggested at the end of each chapter, arms the reader with ideas to conquer the problems created by negative affect and to capitalize on positive, facilitative emotions. The tasks are unrestricted by language and can be modified for use with technology, emergent learners and large classes, making this book a useful resource for both in-service teachers and pre-service teachers in university language teacher education programs.

A clear roadmap for the new territory of education Education in the U.S. has been under fire for quite some time, and for good reason. The numbers alone tell a very disconcerting story: according to various polls, 70% of teachers are disengaged. Add to that the fact that the United States ranks last among industrialized nations for college graduation levels, and it's evident there's a huge problem that needs to be addressed.
