Probability is starting with an animal, and figuring out what footprints it will make.

Statistics is seeing a footprint, and guessing the animal.

Probability is straightforward: you have the bear.

Measure the foot size, the leg length, and

As you already know, statistics is the application of the laws of probability to real, actual data. If you take the D20 example, this would be when you roll the dice 20 times and collect some data. When you apply probability to real data, you are trying to determine if the
