This edition updates benchmarks, includes a new chapter on rhetoric, updated a few examples, and thoroughly updated the bibliography.

Does a young person commit suicide every thirteen minutes in the United States? Are four million women really battered to death by their husbands or boyfriends each year? Is methamphetamine our number one drug problem today? Alarming statistics bombard our daily lives, appearing in the news, on the Web, seemingly everywhere. But all too often, even the most respected publications present numbers that are miscalculated, misinterpreted, hyped, or simply misleading. This new edition contains revised benchmark statistics, updated resources, and a new section on the rhetorical uses of statistics, complete with new problems to be spotted and new examples illustrating those problems. Joel Best's best seller exposes questionable uses of statistics and guides the reader toward becoming a more critical, savvy consumer of news, information, and data. Entertaining, informative, and concise, Stat-Spotting takes a commonsense approach to understanding data and doesn't require advanced math or statistics.

Team-Based Learning (TBL) is a unique, powerful, and proven form of small-group learning that is being increasingly adopted in higher education to achieve high levels of student engagement, critical thinking, and retention. TBL has been used successfully in both small and large classes, in computer-supported and online classes, in nearly every discipline, and in countries around the world. This book introduces the practical elements of TBL and how to apply them in the social sciences and humanities, paying particular attention to the specification of learning goals, which can be a unique challenge in our fields. The core of the book consists of examples of how TBL has been incorporated into the cultures of disciplines as varied as economics, education, literature, politics, psychology, and theatre. At a time of increasing course sizes, and emphasis on learning outcomes, TBL offers the means to meet such demands while helping students learn course content in deeper and more accessible ways than they have in the past.

Internal displacement has become one of the most pressing geo-political concerns of the twenty-first century. There are currently over 45 million internally displaced people worldwide due to conflict, state collapse and natural disaster in such high profile cases as Syria, Yemen and Iraq. To tackle such vast human suffering, in the last twenty years a global United Nations regime has emerged that seeks to replicate the long-established regime of refugee protection by applying international law and humanitarian assistance to citizens within their own borders. This book looks at the origins, structure and impact of this new UN regime and whether it is fit for purpose.

Every kindergarten soccer player gets a trophy. Many high schools name dozens of seniors as valedictorians—of the same class. Cars sport bumper stickers that read "USA—Number 1." Prizes proliferate in every corner of American society, and excellence is trumpeted with ratings that range from "Academy Award winner!" to "Best Neighborhood Pizza!" In Everyone's a Winner, Joel Best— acclaimed author of Damned Lies and Statistics and many other books—shines a bright light on the increasing abundance of status in our society and considers what it all means. With humor and insight, Best argues that status affluence fosters social worlds and, in the process, helps give meaning to life in a large society.

"[An] absolutely fascinating and sobering quest into the fantastic differences between the world as it is and the world as it is portrayed in the statistics the media use. . . .This book is simply a must."--Nachman Ben-Yehuda, author of The Masada Myth "Best is our leading authority on social problems today. His detective work in exposing the spurious use of statistics is essential to constructive social science. No one who speaks for the public welfare can ignore his powerful work."--Jonathan B. Imber, Editor-in-Chief, Society "Joel Best is at it again. In Damned Lies and Statistics, he shows how statistics are manipulated, mismanaged, misrepresented, and massaged by officials and other powerful groups to promote their agendas. He is a master at examining taken-for-granted "facts" and debunking them through careful sociological scrutiny."--Patricia Adler, author of Peer Power "A real page-turner. Best is the John Grisham of sociology!"--James Holstein, author of The New Language of Qualitative Method "In our era, numbers are as much a staple of political debates as stories. And just as stories so often turn into fables, so Best shows that we often believe the most implausible of numbers--to the detriment of us all."--Peter Reuter, co-author of Drug War Heresies: Learning from Other Vices,Times and Places

"This book offers an introduction to critical thinking for sociologists. Critical thinking involves the evaluation of arguments. Because sociologists tend to use particular forms of argumentation, it is helpful to consider how such arguments might be evaluated. Taking these matters into consideration can improve sociological arguments"--

By making introductory statistics interesting through comparing data on today's student generation with their parents' generation, and asking students to consider how people change as they grow older, the book uses data on subjective beliefs (such as freedom of speech and abortion) as well objective characteristics (years of schooling, marital status) to teach basic statistics using SPSS.

Critics often warn that American schools are failing, and that our students are ill-prepared for the challenges the future holds, and may even be "the dumbest generation." We can think of these claims as warning about a Stupidity Epidemic. This essay begins by tracing the history of the idea of that American students, teachers, and schools are somehow getting worse; the record shows that critics have been issuing such warnings for more than 150 years. It then examines four sets of data that speak to whether educational deterioration is taking place. First, data on educational attainment show a clear trend: more students are getting more education. Second, standardized test scores suggest that American students are performing somewhat better; certainly most test scores do not indicate that students are getting worse. Third, measures of popular knowledge also show evidence of improvement. Fourth, there is clear evidence that IQ scores have been rising. In other words, the best available evidence fails to support claims about a Stupidity Epidemic. The essay then turns to exploring several reasons why belief in educational decline is so common, and concludes by suggesting some more useful ways to think about educational problems. The goal of this new, unique Series is to offer readable, teachable "thinking frames" on today's social problems and social issues by leading scholars, all in short 60 page or shorter formats, and available for view on <http://routledge.customgateway.com/routledge-social-issues.html> For instructors teaching a wide range of courses in the social sciences, the Routledge Social Issues Collection now offers the best of both worlds: originally written short texts that provide "overviews" to important social issues as well as teachable excerpts from larger works previously published by Routledge and other presses.
